

ECOSYSTEM BRIEF

Building products for **Stonk** and **Jupiter**

A clear look at the StonkBuilder product thesis and the transfer-funded JUP reward mechanism for eligible \$STONKB holders.

StonkBuilder is an independent project with a connected ambition: create useful products for the Stonk and Jupiter ecosystems, build a community around those products, and give eligible STONKB holders a way to accumulate JUP.

STONKB / JUP PAIR**1% TRANSFER TAX****ELIGIBILITY + PAYOUTS****THE THESIS**

Build useful products. Grow the community. Accumulate JUP as rewards are distributed.

THE MECHANISM

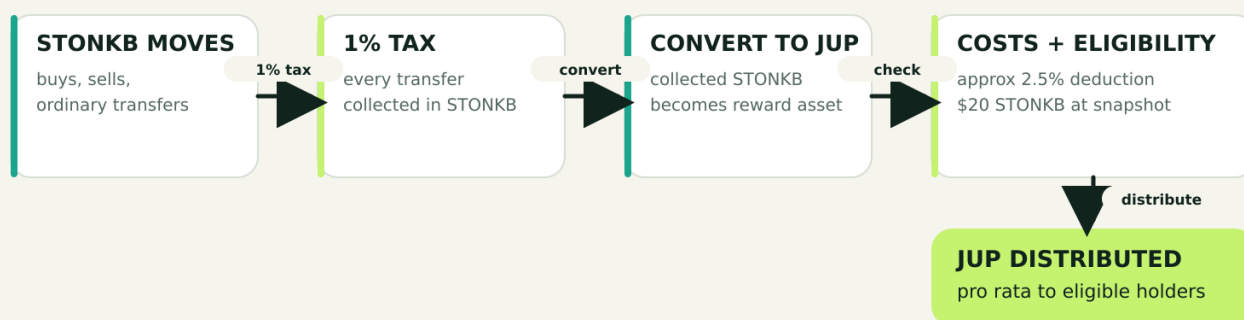

How STONKB activity becomes a JUP payout

The current rail starts with token transfers. Product adoption sits beside it as a conditional community effect, so the visual keeps those claims distinct.

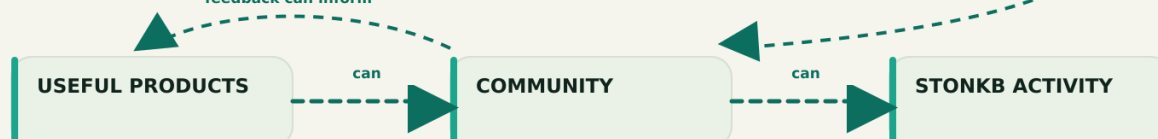

THE JUP FLYWHEEL

From community activity to JUP rewards

HOW REWARDS FLOW

CONDITIONAL ADOPTION LOOP

Solid arrows: current transfer-funded reward path. Dashed arrows: outcomes that depend on adoption and individual choices.

THE PAYOUT PROCESS

Rewards begin with token transfers. A 1% tax is collected in STONKB, converted to JUP, reduced by costs, and distributed pro rata to eligible holders.

WHAT REMAINS CONDITIONAL

Useful products may attract participation; participation can support token activity and produce feedback. Those effects depend on adoption and individual choices.

Website visits alone do not generate a JUP payout. The direct reward source today is the token transfer tax. Reinvestment is a holder choice, not an automatic compounding feature.

THE STUDIO

Products that make the ecosystem easier to read and use

StonkScope is an initial expression of this direction: rewards intelligence and project discovery, alongside a broader studio focused on ecosystem tools and verifiable blockchain data.

ECOSYSTEM MAP

Building for Stonk and Jupiter

DEVELOPMENT DIRECTIONS

Product development directions - not a launch-status map.

REWARDS INTELLIGENCE

Clearer records of distributions and the assets received.

PROJECT DISCOVERY + ANALYTICS

Better context for researching ecosystem projects.

COMMUNITY PARTICIPATION

Tools that make it easier for projects and users to interact.

JUPITER EXPERIENCES

Ways to connect ecosystem activity with Jupiter.

These are development directions, not launch claims. Their value will come from execution: solving specific problems, earning repeat use, and publishing reliable data.

REWARD SNAPSHOT

What is verified today

1,396.59 JUP

approx. lifetime distributed

platform-reported, 18 Sep 2026

\$20 STONKB

minimum at distribution snapshot

current token-page condition

ILLUSTRATIVE ALLOCATION PER PAYABLE DISTRIBUTION

A hypothetical 1,000 JUP reward pot less the stated 2.5% deduction leaves 975 JUP. If one eligible holder represents 1% of the eligible STONKB balance, that share is 9.75 JUP. Actual payouts vary with transfer activity, the accumulated pot, eligibility, and holder share. This assumes the wallet is otherwise eligible and excludes any platform pot or minimum-payment checks.

1000 JUP -> 975 JUP**1% -> 9.75 JUP****SOURCES TO CHECK**[StonkBuilder token page](#) ticker, pair, current holder terms[StonkFun reward documentation](#) reward-coin mechanics[STONKB fee model](#) transfer tax and fee details[STONKB rewards record](#) historical platform-reported total[StonkBuilder website](#) published product direction**HOLDER LENS**

JUP received can be kept or used independently; receiving it does not require selling STONKB.

The paired market and both assets remain exposed to price movement. Rewards do not guarantee net JUP demand or returns.

READ THE TERMS

Rewards are variable and activity-dependent. STONKB and JUP remain exposed to market movements.
